

LISTS - **APPEND** METHOD

This method adds an element to the end of the list. It returns None.

SYNTAX

```
list.append(element)
```

EXAMPLE

```
li = [40, 50]  
li.append(60)  
print(li)
```

OUTPUT

```
[40, 50, 60]
```

The element can be of any data type. Multiple elements cannot be appended using a single **append()** method.

A SMALL QUIZ- **APPEND** METHOD

What would be the output of the following code?

```
li = ['A', 'B']  
li.append(['C', 'D'])  
print(li)
```

OPTIONS

- A) ['A', 'B']
- B) ['A', 'B', ['C', 'D']]
- C) ['A', 'B', 'C', 'D']
- D) Error
